Specification

Providing project feasibility, system selection, estimation, value engineering and design with full monitoring and control of the financial activities at each stage

Services

- Design feasibility, system and product selection based upon the client's requirements, specifications and performance criteria
- CAD - design drawings from preliminary proposals to production drawings
- Value engineering
- Ensure conformance with system house testing, design and manufacturing guidelines
- Assessment of systems to suit those applications beyond the system house parameters, particularly fire resistant and blast resistant systems
- Engagement and management of the structural engineer, reporting and viability of solution
- Consideration of and compliance with statutory requirements – thermal performance, glass photometrics, mechanical strength, preliminary calculations for wind loads and barrier loading
- Manage the project design, creation of production data (optimisation, cutting lists, glass schedule, materials lists, fixing schedules) and management of the procurement within the budgetary and timeframe constraints
- Assessment, development and implementation of new products and systems
- Managing bids
- Adhering to regulatory guidelines and cognizance of risk
- Monthly reviews of contract results and performance
- Monitoring of supply chain and purchasing activities within the third-party supply network assessment, selection and management
- Creation of tender schedules, quotations and specifications
- Carry out cashflow and WIP (Work in Progress) reporting
- Manage CVRs and monitor project expenditure
- Manage and review cost to complete forecasts, applications for payment and valuation
- Deal with claims preparation, extensions of time, final account negotiation and settlement
- Manage the compensation event process including timely submission with cost information
- Existing and new product development and assessment

Systems and Sectors

Commercial – aluminium and steel glazing systems, bespoke rainscreen and cladding systems

Residential – high specification glazing systems, security doors, fire doors, roof-lights, and balustrades

Fire rated – insulated and non-insulated, internal and external products

Security - manual attack resistant, bullet resistant and blast resistant
